

Scalability & Future Plan

Date	30 September 2026
Team ID	SWTID-2026-3630
Project Name	ComicCraft - AI Comic Story Creator
Team Lead	Sivapragasam S
Team Members	Deepak P, Lucky J, Elanthirayan S
Maximum Marks	1 Mark

Current System Limitations

- Current version focuses on generating a single personalized comic.
- Local deployment is used for the documented workflow.
- Generation depends on configured AI model credentials and runtime resources.

Future Plan

Priority	Future Enhancement	Purpose
1	User profiles and account management	Save preferences and generated comics.
2	Comic libraries	Save and revisit generated comics.
3	Multi-page story arcs	Support larger comic projects.
4	Additional personalization	Provide richer generation controls.

Scalability Direction

The modular separation of frontend, backend, AI generation, layout, and export allows individual components to be enhanced without redesigning the complete workflow.
